

INSTRUCTIONS TO AUTHORS

The journal publishes original scientific papers, short communications, up-to-date review articles, and selectively book reviews from the disciplines concerned. Papers are published in English. Manuscripts have to contain English abstracts (including keywords). The author is fully responsible for the originality of the paper, its subject and formal correctness. The author's declaration that the paper has not been submitted anywhere else should be enclosed. The Editorial Board decides on the publication of papers, taking into account peer reviews, scientific importance, and manuscript quality. Scientific papers shall not be longer than 10 standard pages including tables and figures. The SI international system of measurement units should be used. The manuscript should be sent to the Executive Editor by e-mail as an attachment.

Copyright. The journal is protected by copyright held by the publisher after the manuscript has been accepted for publication. As concerns the transfer of rights, the corresponding author takes over responsibility for all authors.

Manuscript layout. Word editor should be used for creating the text in non-formatted style strictly following the journal layout. Tables, graphs, and other materials are submitted separately to the text. Each of the mentioned documents should be printed, commencing on a separate sheet of paper, and its title and detailed description including the measurement units used should be indicated. Word editor should be used to create tables, in tables each item should be placed into a separate cell. Tables are numbered with Arabic numerals in the order in which they are referred to in the text. Graphs should be provided in Excel and they should be stored with original data (the font and type size should be consistent with the general journal format requirements to be incorporated into the text). Autotypes (black and white ones are preferred) should be submitted in high resolution (300 dpi) TIF or JPG format. All graphs and photos should be numbered, continually according to the order in which they are included in the text, using Arabic numerals again. All other materials should be submitted in digital form, black and white format. Coloured photos or maps may be published following an agreement, but this will be exclusively at the authors' own cost. All materials included in the paper should be referred to in the text. If any abbreviations are used in the paper, they shall be explained appropriately when they are used in the text for the first time. It is not advisable to use any abbreviations in the paper title or in the abstract.

Paper title should be short, intelligible, not exceeding 85 characters. No subtitles or numbering the serial articles should be used.

Abstract is a short summary of the whole paper including an outline of the objective, methods, results and conclusions of the paper, but it should not be a mere description. It should also describe all essential facts of a scientific paper and basic numerical data including any statistical evaluation should be incorporated in the abstract. Keywords must be included. The abstract should not contain more than 170 words. Stylistically, whole sentences, not slogans, should be used. The abstract is an important part of the paper because it is published and cited in world databases.

Introduction should outline the main reasons why the research was conducted, demonstrate contemporary knowledge of the subject in question as described by a brief review of literature exclusively consisting of refereed periodicals, journals and books, and the goal of the authors.

Material and methods. All preliminary materials, experiments conducted, their extent, conditions and course should be described in detail in this section. All original procedures that were used for the processing of experimental material and all analytical methods used for evaluation should also be detailed. Data verifying the quality of acquired data should be indicated

for the used methods. The whole methodology is to be described only if it is an original one, in other cases it is sufficient to cite the author of the method and to mention any particular differences. Methods of statistical processing including the software used should also be listed in this section.

Results and discussion. The results obtained from the experiments including their statistical evaluation and any commentary should be presented graphically or in tables in this section. The author should confront partial results with data published by other authors whose names and year of publication are to be cited by including them in the text directly [Novak (2002)] or indirectly [(Novak and Sidlo 2002), (Jakl et al. 2002)]. It is recommended to briefly evaluate at the end of this section whether the set goals were achieved.

References should be a list of refereed periodicals arranged in alphabetical order according to the surname of the first authors (about 20 citations of well reputed journals). The full title of all authors should be followed by the year of publication cited in brackets, the original title of the paper, the name of the periodical using full name, the relevant volume and page number, in the case of a book or proceedings the title should be followed by the name of the publisher and the place of publication. If the cited source is not in English, it should be translated into it, the language in which the material was published originally should be given at the end of the citation (in brackets). Only papers cited in the text should be included in the list of references.

Examples:

Field J.M., Shewry P.R., Mifflin B.J., March J.F. (1982): The purification and characterization of homologous high-molecular-weight storage proteins from grain of wheat, rye, and barley. *Theoretical and Applied Genetics*, 62: 329–336.

Linskens H.F., Jackson J.F. (1992): *Seed Analyses*. Springer-Verlag, Berlin, Heidelberg.

The authors' address. On a separate sheet of paper the author should include his or her full name (co-authors' full names), including all academic and scientific degrees and detailed address of the institution with zip code, phone and fax numbers and e-mail address. The author who is responsible for any correspondence with the journal should be clearly indicated.

Offprints. Every author will receive a free electronic offprint in Portable Document Format (pdf) sent via e-mail as an attachment. Free reprints are also available on the website <http://journals.uzpi.cz/web/pse.htm> or www.cazv.cz.

Detailed instructions for contributors to *Plant, Soil and Environment* journal are available on the website <http://journals.uzpi.cz/web/pse.htm>.

Compliance with these instructions is obligatory for all authors. If a manuscript does not comply exactly with the above requirements, the Editorial Office will not accept it and will return it to the authors without reviewing.
