

The journal publishes original scientific papers, short communications, review articles, and selectively book reviews from the disciplines concerned. Papers are published in English (British spelling). The author is fully responsible for the originality of the paper and formal correctness. The paper must not have been published previously elsewhere. The Board of Editors decides on the publication of papers, taking into account scientific importance, peer reviews and manuscript originality, quality and length. All contributions are reviewed by at least two referees. Scientific papers and review articles shall not be longer than 20 standard pages, including tables and figures. Short communications should not be longer than 6 standard pages and book reviews should not be longer than 3 standard pages.

Manuscripts must be submitted to the Editorial Office through the electronic editorial system only (<http://www.agriculturejournals.cz/web/swr.htm>), in carefully edited, standard English. Receipt of the submitted manuscript will usually be confirmed by e-mail within one week. If, based on the recommendations of the reviewers, a revision of a manuscript is required the modified manuscript must be re-submitted within eight weeks. The authors can, however request an extension of the re-submission deadline, if necessary. All parts of the manuscript, including tables and figures (even unchanged) must be re-submitted. A detailed reply by the authors to every point of reviewer's recommendations must be attached to the revised manuscript. It is not necessary to accept all the recommendations of the reviewers, but a clear explanation of why reviewers' comments were not accepted has to be provided. If the deadline for re-submission is missed, the paper will be removed from the reviewing process.

Copyright. The journal is protected by copyright held by the publisher after the manuscript has been accepted for publication. As concerns the transfer of rights, the corresponding author assumes responsibility for all authors. No part of the publication may be reproduced, stored, or transmitted in any form or by any means, without the written permission of the publisher.

Manuscript layout. Standard size of paper (A4 format), type size 12 font, double-space lines, 2.5 cm margins on each edge of the page. Lines of the manuscript should be numbered. The Microsoft (MS) Word for Windows word processing software should be used for creating text strictly following the journal layout. If any abbreviations are used in the main text, they must be explained appropriately when used for the first time.

Uncommon abbreviations cannot be used in the paper title. In the abstract the abbreviations can be used only when explained. Tables, graphs, and other material have to be submitted separately to the text. All material to be included in a paper should be referred to in the text. The document must not be formatted in columns, heading styles etc. This unique MS Word file must be saved under the first author's surname only.

Tables. Word editor should be used to create tables; each item should be placed into a separate cell. Tables are to be numbered with Arabic numerals in the order in which they are referred to in the text, and have a brief, but self-explanatory title. Explanatory footnotes to tables should be indicated by superscript letters (or asterisks for significance values). Abbreviations or symbols used in the tables must be explained either in the table title or as a footnote. For explanation of abbreviations or symbols used in tables it is not possible to refer to the main text.

Figures. Figure captions should be listed on a separate page placed after the tables. The captions should be brief but contain sufficient information to make the illustrations self-explanatory. Electronic versions of your figures in optimal resolutions (300 dpi.) must be supplied, preferably in black and white format. Graphs should be provided in MS Excel and they should be stored with original data. Centred captions, parallel to axes, are used to indicate the measured attributes and their dimensions (in brackets). Autotypes (photos and diagrams) should be submitted in TIFF or JPG format. All photos, graphs, illustrations and diagrams should be referred to as a figure and numbered, continually according to the order in which they are included in the text, using Arabic numerals. Coloured figures can be published in printed version at the authors' cost. However, coloured documents submitted are published free of charge in pdf format of papers available at the journal web page. Files should be named using the first author's surname with the Figure number (e.g. "Newman Fig1.jpg").

Nomenclature, abbreviations and units. The Latin binomial or trinomial (in italics) and authority must be shown for all plants, insects, animals, and pathogens when first used in either the abstract, the main text, or in a table.

SI units should be used, e.g.: mg, g, km, m, cm, mm, ppm, cpm, Ci(Curie), l(litre), ml, s(second), min(minute), h(hour), mol, etc. Use mg/l instead of mg l^{-1} . The definitive SI website (in English and French) is that of the Bureau International des Poids et Mésures at <http://www.bipm.org/>. Units should be indicated on each occurrence of numerical information and at the axes of all graphs.

To express a unit of measurement, use a space between the number and the unit (5 g; 20 ha) except for percentages and degrees (37%; 27°C). In a series of measurements,

indicate the unit at the end (3, 6, and 8 mm) except for percentages and degrees (2°C to 10°C). Abbreviate units only after a numeric value (24 h; several hours later, 2 days).

In chemical formulae the valence of ions must be given as, for example, Ca²⁺ and CO₃²⁻ rather than as Ca⁺⁺ and CO₃⁻. Isotope numbers should precede the symbols (e.g., ¹⁸O).

The decimal marker is a point (e.g., 0.1 m), while the thousand's separator is a space on either side of the decimal period (e.g., 25 562.987 05). The decimal point in all numbers between 1 and -1, except 0, must be preceded by 0. In general, use words for numbers one through nine, and use digits for 10 and over. For a series of numbers, any of which are over 10, use all digits.

Statistics. Describe statistical methods with enough detail to enable a knowledgeable reader to verify the reported results. Give details of randomization and blocking, as well as number of replications, blocks, or observations. Clearly distinguish between true replications and sub samples within a replication/treatment combination. Always specify the experimental design and indicate whether the design was balanced. When means (or medians) are followed by $\pm x$, indicate whether x refers to the standard deviation, standard error, or half the confidence interval; error bars should similarly be defined. Except for simple procedures (e.g., *t*-tests, one-way analysis of variance, simple linear regression), cite an appropriate and accessible statistical text and indicate the computer program used. In general, statistical techniques should be described in the Materials and Methods.

Title page must contain the paper title (brief but informative; no subtitles shall be used), complete name(s) of the author(s), the name(s) and address(es) of the institution(s) where the work was done.

Abstract is a short summary of the whole paper (as a single paragraph). It should describe all essential facts of a scientific paper. The abstract should not contain less than 200 or more than 400 words. Keywords must be included. The abstract is an important part of the paper because it is published and cited in world databases. No references are to be cited in the abstract.

Keywords (a maximum of 6, in alphabetical order, suitable for indexing) should differ from words mentioned in the title.

The main text of scientific paper must be developed under the following headings:

Introduction

Materials and Methods

Results

Discussion

Introduction should outline the main reasons why the research was conducted, describe a brief review of the literature consisting of refereed periodicals, journals and books, and state the goal of the authors. It is recommended to include references to papers from peer reviewed periodicals only. Citations from non-available sources (reports, books, and proceedings not containing abstract and explanations in English etc.) should be omitted.

Materials and Methods. All material, experiments conducted, their extent, conditions and course should be described in detail in this section. All original procedures that were used for the processing of experimental material and all analytical methods used for evaluation should also be detailed. The entire methodology is only to be described if it is an original one, otherwise it is sufficient to cite the author of the method and to mention any particular differences. Methods of statistical processing including the software used should also be given in this section.

Results and Discussion. The results obtained from the experiments including their statistical evaluation and any commentary should be presented graphically or in tables in this section. Each phenomenon should be commented and explained, using scientific arguments. The author should confront partial results with data published by other authors, whose names and year of publication are to be cited by including them in the text directly, e.g. ... as published by FOSS (2004), WELSH and MCCLELLAND (2001) found ..., or citing authors and years of publication in parenthesis (RENARD *et al.* 1991; WELSH & MCCLELLAND 2001; FOSS 2004). Diacritical signs of national Latin-based alphabets should be preserved. Names in non-Latin alphabets should be transcribed according to international standards. The manuscript should be carefully checked to ensure that the spellings of authors' names and publication years are exactly the same in the text as in the reference list. The citations should be limited to items really needed for placing the paper into a proper context.

After the main text **Acknowledgements** (if any) should follow the text and precede the references.

References should be a list of refereed periodicals arranged in alphabetical order according to the surname of the first authors. The surnames and initials of all authors should be followed by the year of publication cited in brackets, the original title of the paper, full name of the periodical, the relevant volume and page number. In the case of a book or proceedings the title should be followed by the name of the publisher and the place of publication. Names of authors should be separated by commas, not by & or and. The list of references should be arranged alphabetically by authors' names, and chronologically per author. Literary sources should be cited in English. If English is not

the original language, the original language should be mentioned at the end of the citation (e.g.: in Czech). The title of the periodical should be preferably typed in full. Only papers cited in the text should be included in the list of references.

Examples of references in the list:
