

## **Instructions for Authors Veterinární medicína**

The journal publishes original papers, critical review articles and selected case reports in English. Manuscripts should have abstracts (including keywords). The authors are fully responsible for the originality of the paper, its subject and formal correctness. The author's declaration should accompany the submission letter. The Editor-in-chief decides on the publication of papers, taking into account peer reviews, scientific importance, and recommendations of the [Editorial Board](#) members. The manuscripts should be submitted either to the Executive Editor or to the chairperson of the Editorial Board as e-mail attachment or online to the journal website <http://agriculturejournals.cz/web/vetmed.htm>. A properly labelled floppy disk with identical contents, including figures should be enclosed. Alternatively, the manuscript can be sent by e-mail as attachment. No paper will be published unless the Author's Declaration is available in the Editorial Office. Receipt of the submitted manuscript will usually be confirmed by e-mail within one week.

The journal is protected by copyright held by the publisher after the manuscript has been accepted for publication. Regarding the transfer of rights, the corresponding author assumes responsibility for all authors.

Manuscripts must be prepared according to the Instructions to Authors. Literature searches, hypotheses, and experimental design, should be prepared by the entire team of researchers involved, before the research is started and not retrospectively. Good laboratory practice and ethical rules must be followed. Manuscripts by authors not having English as their native language should be translated by translators cognisant in the subject matter or assessed by an experienced language editor working in the same research area. Manuscripts containing language errors are prejudiced in the reviewing process and may be returned to the author for rewriting before peer review and/or before acceptance.

Only manuscripts assessed by leading experts in the field will be published. If such reviews are not available within four months after registration of the manuscript, the peer review process is ceased, and the authors are notified. They can resubmit the manuscript, after its thorough revision and/or update, either to Veterinarni medicina for a new assessment (they must however, be thoroughly convinced that the self-assessment has been unequivocally positive) or to another journal. This should eliminate a long waiting period, and likely rejection of the manuscript. The authors are encouraged to provide an assessment of the manuscript from one or two researchers in the same research field. This option does not substitute the peer review process but it can diminish the risk of submitting a paper not suitable for further reviewing.

If a revision of a manuscript following the recommendations of the reviewers is requested, the modified manuscript must be re-submitted within three weeks. The authors can, however request an extension of the re-submission deadline, if necessary. All parts of the manuscript, including tables and figures (even unchanged) must be re-submitted. A detailed reply by the authors to every point of reviewer's recommendations must be attached to the revised manuscript. It is not necessary to accept all requests of the reviewers, but a clear explanation of why reviewers' comments were not accepted, has to be provided. If the deadline for re-submission is missed, the paper will be removed from the reviewing process.

The proof reading must be returned within two days. Only errors originating during preparation of the document for printing can be corrected. Standard proof marks will be used. No changes in the manuscript after acceptance for publication can be allowed.

**Manuscript layout.** The Microsoft (MS) Word for Windows word processing software should be used for creating text strictly following the journal layout. If any abbreviations are used in the

paper, they must be explained appropriately when used for the first time in the text. It is not advisable to use any abbreviation in the paper title or in the abstract. Tables, graphs and other MS Word documents are to be submitted on separate pages appended to the article. The document must not be formatted in columns, heading styles etc. This unique MS Word file must be saved under the first author's surname only. In the printed version, lines should be numbered. Graphs should be provided in MS Excel and they should be stored with the original data. Photographs and autotypes should be submitted in high resolution (min. 300 dpi) TIFF or JPG format. All tables, graphs and photos should be numbered in the order in which they are included in the text, using Arabic numerals. Files should be named using the first author's surname with the Fig/Photo number (e.g. "Newman Fig1.xls" or "Newman Photo1.jpg").

The paper's **title** should be short and informative, with no subtitles or numbering of "serial" articles (Part I, Part II etc.) should be used. The **Abstract** should not exceed 500 words. It should contain important information on methods used to solve the problem, a clear description of results and their statistical significance, and brief and unambiguous conclusions drawn from the work. References and discussion of results should not be included in the abstract. **Keywords** should not repeat nouns used in the title and should describe the problem studied as well as possible. The **Introduction** section should provide information on the present state of research in the field concerned and on the goal of the study. References in the text should agree with those in the list of references. It is recommended to include references to papers from peer reviewed periodicals only. Citations from only difficultly accessible sources (reports, national journals, proceedings etc.) should be avoided. Papers published by one or two authors are to be cited by their names, those published by three or more authors by the name of the first one et al. If more than one paper by the same author/two authors/first author et al. published in the same year are cited, they should be differentiated by YEAR<sub>a,b,c</sub> both in the text and the list of References. Names and year of publication are to be cited by including them in the text directly, e.g. "... as published by Collins (1997)" or citing authors and years of publication in parenthesis (Collins, 1997). Several papers cited together should be arranged according to the year of publication starting with the oldest one (Collins, 1997; Chiodini, 2000; Hermon-Taylor, 2000a,b; Ayele et al., 2001; Grant et al., 2002a,b; Bull et al., 2003). Users of REFERENCE MANAGER or Endnote can download the specific styles for the citations in text and list of references format used in the journal Veterinarni medicina.

**Material and Methods.** All materials, experiments conducted, their extent, conditions and experimental design should be described in detail in this section. All original procedures used for the processing of experimental material and all analytical methods used for evaluation should also be detailed. Data verifying the quality of acquired data should be indicated for the methods used. The whole methodology is to be described only if it is an original one, in other cases it is sufficient to cite the author of the method and to mention any particular differences. Methods of statistical processing, including the software used, should also be listed in this section. The SI international system of measurement units should be used.

**Results and Discussion.** The results obtained from the experiments including their statistical evaluation and any commentary should be presented graphically or in tables in this section. The author should confront partial results with data published by other authors in papers, presented in Introduction.

**References** should be arranged in alphabetical order according to the surnames and initials of authors. The year of publication (cited in brackets) and the full title of the paper in English with the language of publication in parenthesis, e.g. (in Czech), should follow. The title of the periodical should be preferably typed in full. Use of the official ISI Journal Citation Reports or

Current Contents abbreviations is an alternative but should be used only in exceptional cases. The title “Veterinarni medicina” is to be used instead of abbreviations such as “Vet Med-Czech”. The same applies to other journals cited. In the case of books or proceedings, the title should be followed by the name of the publisher, its location (New York, London etc.) and the total number of pages. Only papers cited in the text should be included in the list of references. All names of the authors must be printed in English transcription without national letters. Authors are responsible for the accuracy of their references.

Links to URL addresses of papers published in the Open Access Journal should be appended to the regular reference on a new line.

Proceedings, abstracts, posters, web pages in references should be omitted.

**The [Declaration of the authors](#)** must be carefully completed and signed by all authors.

Compliance with these instructions is obligatory for all authors. If a manuscript does not comply exactly with the above requirements, the editorial office will not accept it for a consideration and will return it to the authors without reviewing.

One issue of the journal is supplied free of charge to the corresponding author. Free reprints are available at the website <http://agriculturejournals.cz/web/vetmed.htm> or website <http://vetmed.vri.cz>.

Appendix 1

**Self-assessment** questions to be answered by the authors before submission of the manuscript:

1. Is the information to be published new, and thus worthy of publication? Confirmation of previously published results is not a reason for publication; if there are special reasons substantiating a need for confirmation, these should be provided in an accompanying letter.
2. Were well designed experiments and appropriate methods used?
3. Is the paper written in short clear sentences?
4. Has the English been validated by a native-speaker knowledgeable in the field?
5. Is the list of references complete, and are all the references relevant?
6. Where appropriate, are the results statistically significant?
7. Are the titles and legends for tables and figures self explanatory?
8. Were the Instructions to Authors followed?

Please do not submit the manuscript if any of the above questions has been answered in the negative. While something can be learned from most review processes, the reviewers cannot be expected to provide extensive help with corrections, or to educate the authors.

#### Appendix 2

#### **Checklist**

\*) not applicable in review articles

- A single MS Word file named using the surname of the first author
- Title of the article
- Names of authors in English transcription
- Authors affiliation in official English version
- Notes on grant support acknowledgement
- Abstract
- Key words
- Introduction
- Material and Methods\*)
- Results\*)
- Discussion\*)
- Acknowledgement
- References
- On a new page: all author's names, addresses, phone numbers, e-mail addresses
- On a new page: List of tables, figures and photographs

As separate files:

- Tables, graphs and photos
- Declaration of the authors (printed names and e-mails of all authors and their signatures are required)
- Accompanying letter in the body of e-mail with
  - the authors names
  - title of the article
  - complete list of names of files attached
  - name and address of the corresponding author
  - name and address of person(s) who have read the manuscript and recommended its submission
