

CZECH JOURNAL OF GENETICS AND PLANT BREEDING INSTRUCTIONS TO AUTHORS

The journal publishes original papers, short communications, review articles, short scientific reports, book reviews and descriptions of new varieties (as a Short Communications only). Papers are published in English (British spelling). The Manuscript Handling Fee (EUR 320 plus VAT (CZK 8000) in 2018) is payable upon the manuscript acceptance. We recommend checking English by a native speaker or by an English Editing Service. The author is fully responsible for the originality of the paper and formal correctness. The paper must not have been published previously elsewhere. The Board of Editors decides on the publication of papers, taking into account scientific importance, peer reviews and manuscript originality, quality and length. All contributions are reviewed by at least two referees. Scientific papers must not be longer than 10 standard pages (maximum 20 000 characters with spaces), including references, tables and figures. Short communication format is intended for presentation of important observations that can be clearly described in abbreviated format. A short communication must have an abstract and must not exceed six standard pages (10 800 characters with spaces). There are no subheadings and a description of materials and methods must be integrated in the text.

Peer review process. Czech Journal of Genetics and Plant Breeding uses the double-blind peer review, which means that both authors and reviewers are anonymous to each other throughout the review process.

Manuscripts must be submitted to the Editorial Office through the electronic editorial system only (<http://www.agriculturejournals.cz/web/CJGPB.htm>), in carefully edited, standard English.

The manuscript should be submitted in the following separate text files: (1) **Title page** (.doc format), (2) **Manuscript in MS Word** (.doc format), (3) **Tables in MS Word** (.doc format), (4) **Photographs in .jpg/.tiff format** (at least 300 dpi resolution), (5) **Graphs in editable MS Excel** (.xls data files), (5) any Supplementary material. The [templates](#) are available on the journals' website and should be used for all of them.

Title page should include type of the document (original paper, review, short communication, case study), manuscript title, names of all authors in order they will be published in the article (in format first name, surname), authors affiliations, corresponding author e-mail, acknowledgements and funding acknowledgement statements.

Manuscript file should be blinded:

- The authors are fully responsible for the manuscript (also its revised versions and accompanying letter to reviewers) anonymization.
- Names of authors, e-mails and affiliations must be removed.
- Don't mention any acknowledgements and funding acknowledgement statements.
- Don't add any page headers or footers that would identify you.
- Avoid, or try to minimize, any self-citation. If you have cited your own work, make sure you've referred to your own references in the third person, e.g. write "Novak and White (2007) have demonstrated", not "We have previously demonstrated (Novak & White 2007)".
- Remove all personal identifiers (in document properties: author, author of last change) from your files such as Microsoft™ Word® documents and other attachments (figures, tables).

Manuscript layout. Standard size of paper (A4 format), type size 12 font, double-space lines, 2.5 cm margins on each edge of the page. Pages and lines of the manuscript must be numbered in the left-hand margin. The Microsoft (MS) Word for Windows word processing software must be used for creating text strictly following the journal layout. If any abbreviations are used in the main text, they must be explained appropriately when used for the first time. Uncommon abbreviations cannot be used in the paper title. In the abstract the abbreviations can be used only when explained. Tables, graphs, and other material have to be submitted separately to the text. All material to be included in a paper must be referred to in the text. The document must not be formatted in columns, heading styles etc.

Tables. Word editor should be used to create tables; each item must be placed into a separate cell. Tables are to be numbered with Arabic numerals in the order in which they are referred to in the text, and have a brief, but self-explanatory title. Explanatory footnotes to tables should be indicated by superscript letters (or asterisks for significance values). Abbreviations or symbols used in the tables must be explained either in the table title or as a footnote. For explanation of abbreviations or symbols used in tables it is not possible to refer to the main text.

Figures. Figure captions must be listed on a separate page placed after the tables. The captions should be brief but contain sufficient information to make the illustrations self-explanatory. Electronic versions of your figures in optimal resolutions (300 dpi.) must be supplied. Graphs created in MS Excel must be submitted in this format and they should be stored with original data. Centred captions, parallel to axes, are used to indicate the measured attributes and their dimensions (in brackets). Vector files should be submitted

preferably in EMF format. Autotypes (photos and diagrams) must be submitted in TIFF or JPG format. All photos, graphs, illustrations and diagrams must be referred to as a figure and numbered, continually according to the order in which they are included in the text, using Arabic numerals.

Nomenclature, abbreviations and units. The Latin binomial or trinomial (in italics) and authority must be shown for all plants, insects, animals, and pathogens when first used in either the abstract, the main text, or in a table.

SI units should be used, e.g.: mg, g, km, m, cm, mm, ppm, cpm, Ci (Curie), l (litre), ml, s (second), min (minute), h (hour), mol, etc. Use mg/l instead of mg l⁻¹. The definitive SI website (in English and French) is that of the Bureau International des Poids et Mesures at <http://www.bipm.org/>. Units must be indicated on each occurrence of numerical information and at the axes of all graphs.

To express a unit of measurement, use a space between the number and the unit (5 g; 20 ha) except for percentages and degrees (37%; 27°C). In a series of measurements, indicate the unit at the end (3, 6, and 8 mm) except for percentages and degrees (2°C to 10°C). Abbreviate units only after a numeric value (24 h; several hours later, 2 days).

In chemical formulae the valence of ions must be given as, for example, Ca²⁺ and CO₃²⁻ rather than as Ca⁺⁺ and CO₃⁻. Isotope numbers should precede the symbols (e.g., ¹⁸O).

The decimal marker is a point (e.g., 0.1 m), while the thousand's separator is a space on either side of the decimal period (e.g., 25 562.987 05). The decimal point in all numbers between 1 and -1, except 0, must be preceded by 0. In general, use words for numbers one through nine, and use digits for 10 and over. For a series of numbers, any of which are over 10, use all digits.

Statistics. Describe statistical methods with enough detail to enable a knowledgeable reader to verify the reported results. Give details of randomization and blocking, as well as number of replications, blocks, or observations. Clearly distinguish between true replications and sub samples within a replication/treatment combination. Always specify the experimental design and indicate whether the design was balanced. When means (or medians) are followed by $\pm x$, indicate whether x refers to the standard deviation, standard error, or half the confidence interval; error bars should similarly be defined. Except for simple procedures (e.g., *t*-tests, one-way analysis of variance, simple linear regression), cite an appropriate and accessible statistical text and indicate the computer program used (Name, Version, Year). In general, statistical techniques should be described in the Materials and Methods.

Title of the paper must be brief but informative, no subtitles shall be used.

Abstract is a short summary of the whole paper (as a single paragraph). It should describe all essential facts of a scientific paper. The abstract must not go to more than 300 words each for original and review papers, or 150 words for short communications. No references are to be cited in the abstract.

Keywords (a maximum of six, in alphabetical order, suitable for indexing) should differ from words mentioned in the title.

The main text of scientific paper must be developed under the following headings:

Introduction

Material and Methods

Results

Discussion

Introduction should outline the main reasons why the research was conducted, describe a brief review of the literature consisting of refereed periodicals, journals and books, and state the goal of the authors. It is recommended to include references to papers from peer reviewed periodicals only. Citations from non-available sources (reports, books, and proceedings not containing abstract and explanations in English etc.) should be omitted.

Material and Methods. All material, experiments conducted, their extent, conditions and course should be described in detail in this section. All original procedures that were used for the processing of experimental material and all analytical methods used for evaluation should also be detailed. The entire methodology is only to be described if it is an original one, otherwise it is sufficient to cite the author of the method and to mention any particular differences. Methods of statistical processing including the software used should also be given in this section.

Results and Discussion (in two parts or under one heading). The results obtained from the experiments including their statistical evaluation and any commentary should be presented graphically or in tables in this section. The author should confront partial results with data published by other authors, whose names and year of publication are to be cited by including them in the text directly, e.g. ... as published by PAYNE (1987), WELSH and MCCLELLAND (2001) found ..., or citing authors and years of publication in parenthesis (PAYNE 1987; SPETSOV *et al.* 1997; WELSH & MCCLELLAND 2000). Diacritical signs of national Latin-based alphabets should be preserved. Names in non-Latin alphabets should be transcribed according to international standards. The manuscript must be carefully checked to ensure that the spellings of authors' names and publication years are exactly the same in the text as in the reference list. The citations should be limited to items really needed for placing the paper into a proper context.

References should be a list of refereed periodicals arranged in alphabetical order according to the surname of the first authors. The surnames and initials of all authors must be followed by the year of publication cited in brackets, the original title of the paper, full name of the periodical, the relevant volume and page number. In the case of a book or a book chapter the title must be followed by the place of publication and the name of the publisher. Names of authors must be separated by commas, not by & or and. The list of references must be arranged alphabetically by authors' names, and chronologically per author. Literary sources must be cited in English. If English is not the original language, the original language must be mentioned at the end of the citation (e.g.: in Czech). The title of the periodical must be typed in full. Only papers cited in the text are to be included in the list of references.

Examples of references in the list:

1. Journal article:

Payne P.I. (1987): Genetics of wheat storage proteins and the effect of allelic variation on bread making quality. *Annual Review of Plant Physiology*, 38: 141–153.

Supplementary material. Authors can include original, so far unpublished electronic supplementary material (ESM) which may comprise additional tables, data sets, figures, and other non-essential files. ESM will appear only in the electronic version. ESM will be published as submitted and will not be corrected or checked for scientific content, typographical errors or functionality. ESM must be relevant to the parent manuscript, but the manuscript must stand alone without ESM for those readers who will be reading the hard copy only. It should be submitted along with the main manuscript in a separate file and identified as “Supplementary File – for Online Publication Only”. ESM should be identified and mentioned in the main text as Table S1, Table S2, etc. for tables or Figure S1, Figure S2, etc. for figures. ESM should be submitted with captions. Individual file sizes should be restricted to 10 Mb maximum (zipped or unzipped). CJGPB hosts these files on its servers.

Proofs will be sent to the corresponding author by e-mail. Your response, with or without corrections, should be sent within 72 hours.

Offprints: Corresponding author will receive a **free “electronic reprint”** in Portable Document Format (pdf) sent via e-mail as an attachment.

Copyright. The journal is protected by copyright held by the publisher after the manuscript has been accepted for publication. As concerns the transfer of rights, the corresponding author assumes responsibility for all authors. No part of the publication may be reproduced, stored, or transmitted in any form or by any means, without the written permission of the publisher.

Compliance with these instructions is obligatory for all authors. If a manuscript does not comply exactly with the above requirements, the editorial office will not accept it for a consideration and will return it to the authors without reviewing.
