

Horticultural Science (Prague)

Instructions to Authors 2018

The journal publishes results of basic and applied research from all areas of horticulture - fruit growing, vegetable growing, viticulture, floriculture, medicinal plants, ornamental gardening, garden and landscape architecture. The main concern is on plants growing under the conditions of the European temperate zone and countries with a similar climate. Original scientific papers, short communications, and review articles are published in the journal. Papers are published in English (British spelling).

Manuscript handling fee (320 EUR/article (8 000 CZK – authors from the Czech Republic) prices are without VAT) is payable upon the manuscript acceptance.

The **author is fully responsible for the originality** of the paper and formal correctness. **The paper or its main content must not be published previously elsewhere.** The Managing Editorial Board decides on the publication of papers, taking into account scientific importance, peer reviews and manuscript originality, quality and length.

Standard size of paper: (A4 format), type size 12 font, double-space lines, 2.5 cm margins on each edge of the page. **Scientific papers and review articles shall not be longer than 15 standard pages, including tables and figures.** Short communications should not be longer than 6 standard pages. Manuscripts must be submitted in Word text editor to electronic editorial system:

<https://www.agriculturejournals.cz/web/hortsci/>

Copyright. The journal is protected by copyright held by the publisher after the manuscript has been accepted for publication. As concerns the transfer of rights, the corresponding author takes over responsibility for all authors. No part of this publication may be reproduced, stored, or transmitted in any form or by any means, without the written permission of the publisher.

Title page must contain title of paper (short, not exceeding 85 characters; no subtitles shall be used), complete name(s) of the author(s), the name(s) and address(es) of the institution(s) where the work was done.

Abstract is a short summary of the whole paper (as a single paragraph). It should describe all essential facts of a scientific paper. The abstract should not go to more than 170 words. The abstract is an important part of the paper because it is published and cited in world databases. No references are to be cited.

Keywords (recommendation 5 words) should be different from words mentioned in the title.

The main text of scientific paper must be developed under the following headings:

INTRODUCTION,
MATERIAL AND METHODS,
RESULTS AND DISCUSSION.

Introduction should outline the main reasons why the research was conducted; describe a brief review of literature consisting of refereed periodicals, journals and books, and the goal of the authors. It is recommended to include references to papers from peer reviewed periodicals only. Citations from non-available sources (reports, proceedings etc.) should be omitted.

Material and Methods. All tested material, experiments conducted, their extent, conditions and course should be described in detail in this section. All original procedures that were used for the processing of experimental material and all analytical methods used for evaluation should also be detailed described. Data verifying the quality of acquired data should

be indicated for the used methods. The complete methodology should be described only if it is an original one; in other cases it is sufficient to cite the author of it and mention only particular differences if any. Methods of statistical processing including the software used should also be listed in this section.

Results and Discussion. The results obtained from the experiments including their statistical evaluation and any commentary should be presented graphically or in tables in this section. Each new finding should be commented and explained, using scientific arguments. The author should compare partial results with data published by other authors, whose names and year of publication are to be cited by including them in the text directly, e.g. ... as published by LOWE (1981), NOVÁK and ŠÍDLO (2002) found ..., or citing authors and years of publication in parenthesis (LOWE 1981; NOVÁK, ŠÍDLO 2002; JAKL et al. 2014). Diacritical signs of national Latin-based alphabets should be preserved. Names in non-Latin alphabets should be transcribed according to international standards. The citations should be limited to items really needed for placing the paper into a proper context.

Tables should be placed at the end of the manuscript. Word editor should be used to create tables; each item should be placed into a separate cell. Tables should be numbered using Arabic numbering in the order in which they are referred to in the text, and have a brief, but self-explanatory title. Footnotes to tables should be indicated by superscript letters (or asterisks for significance values). Abbreviations or symbols used in the tables must be explained either in the table title or as a footnote. For explanation of abbreviations or symbols used in tables it is not possible to refer to the main text.

Figures. Figure captions should be placed behind tables. The captions should be brief but contain sufficient information to make the illustrations self-explanatory. **Graphs should be provided in MS Excel** and they should be stored with original data. Centred captions, parallel to axes, are used to indicate the measured attributes and their dimensions (in brackets). Autotypes should be submitted in JPG or TIFF format in **minimal resolution 300 dpi**. All graphs and photos should be numbered, continually according to the order in which they are included in the text, using Arabic numerals. Files should be named using the first author's surname with the Figure number (e.g. "Newman Fig1.jpg"). All material to be included in a paper should be referred to in the text.

Abbreviations and units. If any abbreviations are used in a paper, they shall be explained appropriately when they are used in the text for the first time. It is not advisable to use any abbreviations in the paper title or in the abstract.

The SI international system of measurement units should be used, e.g. kg, g, mg, km, m, cm, mm, ppm, l (litre), ml, s (second), min (minute), h (hour), mol etc. **Use g/cm instead of g.cm⁻¹**. The definitive SI website is that of the Bureau International des Poids et Mesures at <http://www.bipm.org/>. Units should be indicated on each occurrence of numerical information and at the axes of all graphs. To express a unit of measurement, space between the number and the unit (5 g; 20 ha) except of percentages and degrees (37%; 27°C). In a series of measurements, indicate the unit at the end (3, 6, and 8 mm). Abbreviate units only after a numeric value (24 h; several hours later; 2 days). In chemical formulae the valence of ions must be given as, e.g. Ca²⁺ and CO₃²⁻ rather than as Ca⁺⁺ and CO₃⁻. Isotope numbers should precede the symbols (e.g. ¹⁸O). The decimal marker is a point (e.g. 0.1 m), while the thousand's separator is a comma (e.g. 2,000). The decimal point in all numbers between 1 and -1, except 0, must be preceded by 0. In general, use words for numbers one through nine, and use digits for 10 and over. For a series of numbers, any of which are over 10, use all digits.

References should be preferably a list of refereed periodicals arranged in alphabetical order according to the surname of the first authors. The surnames and initials of all authors should be followed by the year of publication cited, the original title of the paper (if the cited source is not in English, it should be translated in brackets behind of the original title), the name of the periodical, the relevant volume and page number, in the case of a book or proceedings the title should be followed by the name of the publisher and the place of publication. Names of authors should be separated by commas, not by & or and. If an author's name in the list is also mentioned with co-authors, the following order should be used: publications of the single author, arranged according to publication year – publications of the same author with one co-author, arranged according to publication year – publications of the author with more than one co-author, arranged according to publication year. Only papers cited in the text must be included in the list of references.
