

The journal publishes original papers, short communications and critical review articles in English (British spelling). All manuscripts should have abstracts (including keywords). The author is fully responsible for the originality of the paper and factual correctness. The paper must not have been submitted or published elsewhere. Manuscripts can only be submitted through our on-line system:

<http://www.agriculturejournals.cz/web/pps/> and upload your manuscript following the instructions given in tab Guide for Authors. Authors are urged to have the manuscript critically appraised before it is submitted. The Editorial Board decides on its publication, taking into account peer reviews, scientific importance, and manuscript quality. Papers suitable for consideration will be sent to at least two referees. **Original papers should not exceed 20 000 characters with spaces (including tables, references and figure captions.** Short communication format is intended for presentation of important observations that can be clearly described in abbreviated format. A short communication should have an abstract and should not exceed 10 800 characters. There are no subheadings and a description of materials and methods should be integrated in the text.

No page charges are applicable, but prospective authors should condense their text as much as possible.

**Declaration of the authors** (available from the PPS website: [http://www.agriculturejournals.cz/web/pps/wp-content/uploads/sites/8/PPS\\_authorDeclaration.pdf](http://www.agriculturejournals.cz/web/pps/wp-content/uploads/sites/8/PPS_authorDeclaration.pdf)) must be carefully completed and signed by the corresponding author, and then scanned in .pdf format to be uploaded in the submission of your manuscript. Before acceptance of manuscript it is necessary to pay the **Manuscript Handling Fee** 320 EUR + VAT per article (CZK 8000). The author is charged a publication fee 320 EUR up to 8 printing pages (20 000 characters of Word file) for each accepted article. The author is required to pay 30 EUR for each additional page.

**Copyright.** The journal is protected by copyright held by the publisher after the manuscript has been accepted for publication. As concerns the transfer of rights, the corresponding author takes over responsibility for all authors. No part of the publication may be reproduced, stored, or transmitted in any form or by any means, without written permission.

**Peer review process.** The Plant Protection Science journal uses the **double-blind peer review**, which means that both authors and reviewers are anonymous to each other throughout the review process.

#### **Manuscript submission**

The manuscript should consist of the following sections: Title page, Abstract, Keywords, Introduction, Materials and Methods, Results, Discussion, References, Address of corresponding author, Tables and Legends to Figures.

The manuscript should be submitted to the Editorial Office in the form of two main separate text files: **Title page** and the **Manuscript** file (title, abstract content text, tables and figures). The [templates](#) are available on the journals' website and should be used for both of them.

**Title page** should include type of the document (original paper, review, short communication, case study), manuscript title, names of all authors in order they will be published in the article (in format first name, surname), authors affiliations, corresponding author email, dedication and acknowledgement.

**Manuscript file** should be blinded:

- The authors are fully responsible for the manuscript (also its revised versions and accompanying letter to reviewers) anonymization.
- Names of authors, emails and affiliations must be removed.
- Don't mention any dedications or acknowledgments.
- Don't add any page headers or footers that would identify you.
- Avoid, or try to minimize, any self-citation. If you have cited your own work, make sure you've referred to your own references in the third person, e.g. write "Novak and White (2007) have demonstrated", not "We have previously demonstrated (Nova, White 2007)".
- Remove all personal identifiers from your files such as Microsoft™ Word® documents and other attachments (figures, tables). Instructions how to remove the file personal identifiers can be found for example on [this web](#).

**Manuscript layout.** The Microsoft (MS) Word for Windows word-processing software should be used for creating the text in non-formatted style strictly following the journal layout (standard paper size A4). Type in **double spacing**, using at least a **12 point font**, leaving adequate margins. Each page should be numbered. Text lines should be numbered, with the numbers restarting on each page. Underline (to indicate italicisation) no part of the text or headings unless it is absolutely necessary, i.e. for emphasis, genera and species names, some chemical descriptors and journal titles. Do **not** underline headings. Please use Word's "Save As" option to save your document as a .doc file type. Tables (formatted in MS Word and will not be permitted as an image file) and Figures must be enclosed separately. Each of them must be referred to in the text (Figure 1 not Fig. 1 and Table 1 no Tab. 1). Figures should be restricted to material essential for documentation and understanding of the text. Duplicated documentation of data in both tables and figures is not acceptable. All illustrative material must be of publishing quality. Both line drawings and photographs are referred to as figures. Photographs should have high contrast. Each figure should be accompanied by a concise, descriptive legend. Autotypes should be submitted in **TIF or JPGE format** with high resolution (min 300 dpi) not as image files inserted into MS Word. Graphs should be provided in **MS Excel** and should be stored with original data.

**Nomenclature, abbreviations and units.** The Latin binomial or trinomial (in italics) and authority must be shown for all plants, insects, animals, and pathogens when first used in either the abstract, the main text, or in a table.

**SI units** should be used, e.g.: mg, g, km, m, cm, mm, ppm, cpm, Ci (Curie), l (litre), ml, s (second), min (minute), h (hour), mol, etc. Use mg/l instead of  $\text{mg}\cdot\text{l}^{-1}$ . The definitive SI website (in English and French) is that of the Bureau International des Poids et Mésures at <http://www.bipm.org/>. Units should be indicated on each occurrence of numerical information and at the axes of all graphs.

To express a unit of measurement, use a space between the number and the unit (5 g; 20 ha) except for percentages and degrees (37%; 27°C). In a series of measurements, indicate the unit at the end (3, 6, and 8 mm) except for percentages and degrees (2°C to 10°C). Abbreviate units only after a numeric value (24 h; several hours later, 2 days).

In chemical formulae the valence of ions must be given as, for example,  $\text{Ca}^{2+}$  and  $\text{CO}_3^{2-}$  rather than as  $\text{Ca}^{++}$  and  $\text{CO}_3^{-}$ . Isotope numbers should precede the symbols (e.g.,  $^{18}\text{O}$ ).

The decimal marker is a point (e.g., 0.1 m), while the thousand's separator is a space on either side of the decimal period (e.g., 25 562.987 05). The decimal point in all numbers between 1 and -1, except 0, must be preceded by 0. In general, use words for numbers one through nine, and use digits for 10 and over. For a series of numbers, any of which are over 10, use all digits.

The Latin binomial or trinomial (in italics) and authority must be shown for all plants, insects, animals, and pathogens when first used in either the abstract, the main text, or in a table.

**Statistics.** Describe statistical methods with enough detail to enable a knowledgeable reader to verify the reported results. Give details of randomisation and blocking, as well as number of replications, blocks, or observations. Clearly distinguish between true replications and sub samples within a replication/treatment combination. Always specify the experimental design and indicate whether the design was balanced. When means (or medians) are followed by  $\pm x$ , indicate whether  $x$  refers to the standard deviation (SD), standard error, or half the confidence interval; error bars should similarly be defined. Except for simple procedures (e.g.,  $t$ -test, one-way analysis of variance, simple linear regression), cite an appropriate and accessible statistical text and indicate the computer program used. In general, statistical techniques should be described in the Material and Methods.

**Statistical symbols and abbreviations:** analysis of variance – ANOVA; coefficient of variation – CV; degree of freedom –  $df$ ; F-distribution –  $F$ ; least significant difference –  $LSD$ ; sample size –  $n$ ; probability –  $P$ ; simple correlation coefficient –  $r$ ; simple correlation of determination –  $r^2$ ; multiple correlation coefficient –  $R$ ; multiple correlation of determination –  $R^2$ ; variance (sample) –  $s^2$ ; standard deviation (sample) – SD; standard

error – SE; standard error of the differences of means – SED; standard error of mean – SEM; *t*-(or Student) test – *t*; mean –  $\bar{x}$ .

All **abbreviations** and **acronyms** should be defined at first mention. To facilitate reader comprehension, abbreviations should be used sparingly. **Latin terms** such as *et al.*, *in situ*, *in vitro*, or *in vivo* should be italicised. Degree symbols (°) must be used and not superscript letter “o” or number “0”. Spaces must be inserted between numbers and units (e.g., 3 kg) and between numbers and mathematical symbols (+, –,  $\frac{\square}{\square}$ , =, >, <), but not between numbers (5°C) and percent symbols (e.g., 45%). Additional use symbols: dry weight (matter) – DW (DM); fresh weight – FW (FM); water use efficiency – WUE.

The author should confront partial results with data published by other authors, whose names and year of publication are to be cited by including them in the text directly, e.g. ... as published by TURNER (1999), CLOAREC and RIVAULT (2001) found ..., or by citing authors and years of publication in parentheses (BALAN *et al.* 1997; TURNER 1999; CLOAREC & RIVAULT 2001). Papers published by one or two authors are to be cited by their names, those published by three or more authors by the name of the first one *et al.* If more than one paper by the same author/two authors/first author *et al.* published in the same year are cited, they should be differentiated by YEARA, b, c both in the text and the list of References.

The **Title** of the paper should be short and informative, not exceeding **85 characters**. No subtitles or numbering of “serial” articles (Part I, Part II etc.) should be used. Only one name of organisms – Latin binomial or trinomial nomenclatures (in italics) without authority or English name – should be used. It is not advisable to use abbreviations in the title.

**Under the title** of the paper is necessary to add complete name(s) of the author(s) – e.g. full names for all authors; that is, full first/given name(s), middle initial(s), and last/surname(s), the name(s), address(es) of the institution(s) where the work was done, and e-mail address of the corresponding author.

The **Abstract** shall not exceed **120 words**. It should state in short and concise form what was done and how, and contain basic numerical and statistical data from the results. The abstract is an important part of the paper because it is published and cited in the world database.

**Keywords** follow the abstract and should contain: (a) name of the pathogen or pest; (b) name of the host; (c) control measures; (d) other specific points (if needed). They are written in lower case letters and separated by semicolons.

**Introduction** should outline the main reasons why the research was conducted, describe a brief review of literature consisting of refereed periodicals, journals and books, and the goal of the authors. References in the text should agree with those in the list of references. It is recommended to include references to papers from peer reviewed periodicals only. Citations from only difficultly accessible sources (reports, national journals, proceedings etc.) should be avoided.

In **Material and Methods**, the description of experimental procedures should be sufficient to allow replication. Organisms must be identified by scientific name, including authors. The International System of Units (SI) and their abbreviations should be used. Methods of statistical processing, including the software used, should also be listed in this section.

**Results** should be presented clear and concise without deducting and theorising. Graphs should be preferred over tables to express quantitative data.

The **Discussion** should interpret the results, without unnecessary repetition.

In short communication is possible to draw part Result and Discussion together.

**Acknowledgments**, if needed, follow.

### **Details for formatting references**

Cite only necessary publications and use primary rather than secondary references when possible. It is acceptable to cite work that is “forthcoming” (that is, accepted but not published) with the pertinent year and volume number of the reference. Works that are “submitted” and under review are not to be cited. Literary sources should be cited in the original language. Only papers cited in the text should be included in the list of references.

You prepare your manuscript, please carefully consider papers published recently in the *Plant Protection Science* for relevance to your study.

#### **(a) In text**

When the author’s name (as capitals) is part of the sentence structure, the citation consists of the year (in parenthesis) immediately following the name. In citations that are totally parenthetical, do not separate author and year without comma. Use commas to separate publications in different years by the same author. Cite two or more publications of different authors in chronological sequence, from earliest to latest.

Examples

- SMITH (2008) showed that . . . :
- Inside many of conidia were observable (JANKOVSKÝ 2003).
- ... work (DAWSON *et al.* 1964) has shown that . . .
- ...work (DAWSON & BRIGGS 2006, 2008) has shown that . . .
- ...work (DAWSON 2006; BRIGGS 2008) has shown that . . .
- ...work (DAWSON 1999a, b) has shown that . . .

#### **(b) In Reference section**

The surnames and initials of all authors should be followed by the year of publication cited in brackets, the original title of the paper, full name of the periodical, the relevant volume and page number. In the case of a book or a book chapter the title should be followed by the place of publication and the name of the publisher. Names of authors should be separated by commas, not by “&” or “and” before the last author. The list of references should be arranged alphabetically by the first author’s name, and chronologically per author. Literary sources should be cited in the original language. Single author precedes same author with co-authors. When the author designation (name or names) is identical in two or more references, these references are sequenced by publication date (earliest to latest). Full name of the periodical should be used. Type references flush left as separate paragraphs. Use the following format.

- **Journal article:** Author(s) (surname and abbreviation of the first name without comma) (Year): Article title. **Full journal title**, Volume number: inclusive pages.

*Example:*

Haltofová P. (2006): Vegetative compatibility groups of *Cryphonectria parasitica* (Murrill) M. E. Barr in the Czech Republic. *Advances in Horticultural Science*, 20: 1–4.

Form of citation in text: (HALTOFOVÁ 2006).

Cloarec A., Rivault C. (2001): Age-related changes in foraging in the German cockroach. *Journal of Insect Physiology*, 4: 661–673.

Form of citation in text: (CLOAREC & RIVAULT 2001)

Ye W., Zeng Y., Kerns J. (2015). Molecular characterisation and diagnosis of root-knot nematodes (*Meloidogyne* spp.) from turf grasses in North Carolina, USA. *PLoS ONE* 10 (11), e0143556. doi:10.1371/journal.pone.0143556

Form of citation in text: (YE *et al.* 2001)

- **Electronic journal article:** Author(s) (Year): Title of article. Name of electronic journal (serial online). Volume number: inclusive pages. Available from give site (accessed date ...).

*Example:*

Steinkraus K.H. (2002): Fermentation in world food processing. *Comprehensive Reviews in Food Science and Food Safety* (serial online). 1: 23–32. Available from [www.ift.org](http://www.ift.org) (accessed Apr 1, 2002).

Form of citation in text: (STEINKRAUS 2002)

- **Book:** Author(s) [or editor(s) – (ed.(s))] (Year): Title. Edition or volume (if relevant). Place of publisher, Publisher name: extent of pages.

*Example:*

Agrios G.N. (2005): *Plant Pathology*. 5<sup>th</sup> Ed. Amsterdam-Boston, Elsevier-Academic Press: 15–28.

Form of citation in text: (AGRIOS 2005).

- **Chapter in book:** Author(s) of the chapter. Year: Title of the chapter. In: author(s) or editor(s). Title of the book. Edition or volume, if relevant. Place of publisher, Publisher name: Inclusive pages of chapter.

*Example:*

Shimizu T., Nakayama I., Nagayama K., Miyazawa T., Nezu Y. (2002): Acetolactate synthase inhibitors. In: Boger P., Wakabayashi K., Hirai K. (eds): *Herbicide Classes in Development: Mode of Action, Targets, Genetic Engineering, Chemistry*. New York, Springer-Verlag: 1–41.

Form of citation in text: (SCHIMIZU *et al.* 2002).

- **Conference Proceedings:** Editor(s). Title of publication. Number and name of conference; date of conference; place of conference. Place of publication: publisher; date. Extent. Notes.

*Example:*

Tourvieille de Labrouhe D., Walser P., Jolivot D., Roche S., Serre F., Leguillon M., Delmotte F., Bordat A., Godiard L., Vincourt P., Vear F. (2012): Proposal for improvement of sunflower downy mildew race nomenclature. In: *Proceedings 18<sup>th</sup> International Sunflower Conference, Feb 27–March 1, 2012, Mar Del Plata, Argentina*. Paris, International Sunflower Association: 322–327.

Form of citation in text: (TOURVIEILLE DE LABROUHE *et al.* 2012).

Webb R., Steagall T., Brown A. (eds) (2008): *Proceedings 4<sup>th</sup> National Conference on Processing Technologies*; April 9–12, 2008, Portland, Chicago. American Association of Processing Technology; c2008.

Form of citation in text: (WEBB *et al.* 2008).

- **Patent:** Name of the inventor(s) of the patented device or process; the word “inventor(s),” assignee. Date issued [year month day]. Title. Patent descriptor [name of country issuing the patent and the patent number].

*Example:*

Harred J.F., Knight A.R., McIntyre J.S., inventors; Dow Chemical Co., assignee. 1972 Apr 4. Epoxidation process. U.S. patent 3,654,317.

Form of citation in text: (HARRED *et al.* 1972).

- **Dissertation:** Author. Date of degree. Title [type of publication, such as dissertation, PhD thesis, MSc thesis] Place of institution: Institution granting degree. Total number of pages. Availability statement.

*Example:*

Smith D.E. (2008). Lipid oxidation at very low water activities. [PhD Dissertation.] Cornell University Ithaca. Available at University Microfilms, Ann Arbor, USA: ABD62-83.

Form of citation in text: (SMITH 2008).

- **Websites and other internet material:** Title or webpage or database [medium designator]. Edition (if relevant). Place of publication, Publisher; date of publication [date updated; date accessed]. Notes.

*Example:*

Bureau of Plant Industry (2006): Available at <http://www.bpi.da.gov.ph/Publications/html> (accessed 5.11.2009).

Form of citation in text: (Bureau of Plant Industry 2006)

Stephens J.M. (2003): Gourd, Bottle – *Lagenaria siceraria* (Mol.) Standl. University of Florida. Available at <http://edis.ifas.ufl.edu/MV069> (accessed Nov 5, 2009).

Form of citation in text: (STEPHENS 2003)

**Supplementary material.** Authors can include original, so far unpublished supplementary material (ESM) which may comprise additional tables, data sets, figures, and other non-essential files. ESM will appear only in the PPS electronic version. ESM will be published as submitted and will not be corrected or checked for scientific content, typographical errors or functionality. ESM must be relevant to the parent manuscript, but the manuscript must stand alone without ESM for those readers who will be reading the hard copy only. It should be submitted along with the main manuscript in a separate file and identified as “Electronic Supplementary File – for Online Publication Only”. ESM should be identified and mentioned in the main text as Supplementary Table S1, Supplementary Table S2, etc. for tables or Supplementary Figure S1, Supplementary Figure S2, etc. for figures or Supplementary Material S1, Supplementary Material S2, etc. for other material. ESM should be submitted with captions. Individual file sizes should be restricted to 10 Mb maximum (zipped or unzipped). PPS hosts these files on its servers.

**Offprint:** Every author will receive a free “electronic reprint” in Portable Document Format (pdf).

**Compliance with these instructions is obligatory for all authors. If a manuscript does not fulfil these requirements, the editorial office will not accept it for consideration but will return it to the authors without reviewing.**

Revised October 2018
